

Junior C++ Developer

MNKnowledge is a bespoke technology consultancy established in 2014.

We're kicking off a major partnership with a new, highly anticipated client. This is a rare chance to join a company that is skipping the risky startup phase and moving straight to success.

The founders of this venture are not beginners; they are seasoned business and technology experts with deep experience at large international corporations. Their credibility is cemented by the fact that they previously co-founded and successfully sold a major IT service company a few years ago.

Their proven track record has enabled them to already secure several large, high-value projects before their public launch.

Now we are actively seeking a Junior C++ Developer.

About the Role

We are looking for a fully remote Junior C++ Developer to join our support and maintenance team. The successful candidate will assist in analyzing, troubleshooting, and enhancing existing Windows desktop application built using Visual C++ ,MFC and ActiveX controls. This role focuses on maintaining the application, resolving defects, and implementing small enhancements, while ensuring system stability and performance.

Key Responsibilities

- Provide technical support and maintenance for existing Windows desktop application.
- Investigate and fix bugs in C++ applications.
- Work with Visual C++, MFC.
- Maintain and extend ActiveX controls.
- Collaborate with senior developers to ensure smooth application operation.
- Participate in code reviews, testing, and documentation of support activities.

- Adhere to software development standards and internal change management procedures.

Required Skills and Qualifications

- Experience in C++.
- Familiarity with MFC framework and ActiveX controls is a plus.
- Debugging and problem-solving skills.
- Knowledge of version control systems.
- Fluent in English.
- Good communication and teamwork skills.

What We Offer

- Hands-on experience maintaining and improving large-scale systems.
- Continuous learning from experienced C++ professionals.
- Stable and supportive work environment focused on quality and reliability.
- Competitive compensation and professional development opportunities.
